From: Review Committee for Osteopathic
Neuromusculoskeletal Medicine

Re: Change in Calculation of Continuity of Care Clinic Patient
Encounters

The Review Committee for Osteopathic Neuromusculoskeletal Medicine has changed the calculation of continuity of care clinic patient encounters in the ACGME Case Log System that was first introduced as a temporary change in 2021.

Now permanent, and effective January 2024, all patient encounters logged in the ACGME Case Log System that include osteopathic manipulative treatment (OMT), and that are supervised by a board-certified or board-eligible neuromusculoskeletal medicine specialist are included in the continuity of care clinic patient encounter calculation.

Contact Review Committee staff members with any questions.
